

Datadog Announces Integration with Nessus

February 25, 2020

NEW YORK--(BUSINESS WIRE)--Feb. 25, 2020-- Datadog (Nasdaq:DDOG), the monitoring and analytics platform for developers, IT operations teams, and business users in the cloud age, today announced an integration with Nessus® from [Tenable® Inc.](#) The integration ensures advanced vulnerability assessment capabilities from Nessus are available as part of a secure, end-to-end DevOps process. This enables DevOps teams that rely on Datadog for their critical cloud monitoring to have constant visibility into the health and status of their Nessus deployments.

The Datadog integration with Nessus can detect when and where an assessment begins and ends, which is then correlated with metrics and logs on Datadog's cloud monitoring platform. By bringing this data together, Datadog and Tenable create a more complete picture of the security posture and infrastructure performance of a user's cloud environment. This integration will serve the needs of cross-functional teams that operate in the cloud and monitor Nessus by ensuring full visibility into the status of their Nessus deployments.

"Tenable is at the heart of vulnerability management for many of our customers, and real-time visibility into vulnerability assessments is increasingly relevant to Dev and Ops teams as well," said Marc Tremzal, Director of Product Management, Datadog. "Our integration will help break down the silos between these functions by ensuring that teams receive the same visibility into security as they do other key observability data."

"Nessus is the number one vulnerability assessment solution in the world, with unsurpassed accuracy and coverage trusted by more than 30,000 organizations. Now we're working with Datadog to give DevOps teams constant visibility into their Nessus assessments, bringing enhanced insight into cyber risk throughout the software development lifecycle," said Renaud Deraison, co-founder and chief technology officer, Tenable. "Today's announcement is simply the first, exciting step in what we believe Tenable and Datadog can do together to help DevOps teams and the cybersecurity community."

About Datadog

Datadog is the monitoring and analytics platform for developers, IT operations teams and business users in the cloud age. Our SaaS platform integrates and automates infrastructure monitoring, application performance monitoring and log management to provide unified, real-time observability of our customers' entire technology stack. Datadog is used by organizations of all sizes and across a wide range of industries to enable digital transformation and cloud migration, drive collaboration among development, operations and business teams, accelerate time to market for applications, reduce time to problem resolution, understand user behavior and track key business metrics.

Forward-Looking Statements

This press release may include certain "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933, as amended, or the Securities Act, and Section 21E of the Securities Exchange Act of 1934, as amended. These forward-looking statements reflect our current views about our plans, intentions, expectations, strategies and prospects, which are based on the information currently available to us and on assumptions we have made. Actual results may differ materially from those described in the forward-looking statements and are subject to a variety of assumptions, uncertainties, risks and factors that are beyond our control, including those risks detailed under the caption "Risk Factors" and elsewhere in our Securities and Exchange Commission filings and reports, including the Annual Report on Form 10-K filed with the Securities and Exchange Commission on February 25, 2020, as well as future filings and reports by us. Except as required by law, we undertake no duty or obligation to update any forward-looking statements contained in this release as a result of new information, future events, changes in expectations or otherwise.
